

Bitcoin Certificate

Timestamp

Sep 16, 2026, 01:07:49 AM

Data Hash:

0xe0a2f67169d8cfc5a1e2ee88a6c6583186ffa71a45c0c47e59b32fa50e38ce6d

Blockchain Transaction Link:

0x54a2668a6458d33cd94bac8257031c37d0f88c8aad9bdd7bd24e4ce2dade770a

Root Hash:

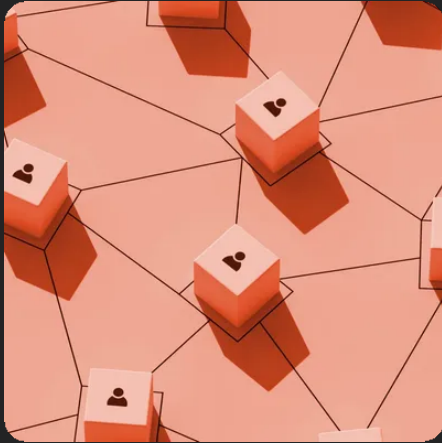

0xd579a4a43a135b57effd2ae2c46af363dd433412103c76b6459a96a4cb1bb24f

This certificate is only valid in combination with the original file and OriginStamps open procedure.

VERIFICATION

OriginStamp creates tamper-proof timestamps by embedding a cryptographic fingerprint of your data into the blockchain. Your original files remain private and are never uploaded.

1. Generate SHA-256 Hash

Calculate the SHA-256 fingerprint of your original file using any standard tool.

2. Validate Proof

Open your proof file in a text editor and ensure it contains your file's SHA-256 hash.

3. Determine Root Hash

OriginStamp uses a Merkle Tree to aggregate multiple hashes into a single Root Hash. If the calculated Root Hash matches the one on the blockchain, the integrity is verified.

4. Locate Bitcoin Transaction

The Root Hash is permanently recorded in the Bitcoin blockchain within an OP_RETURN transaction.

5. Verify Timestamp

The block time of this transaction serves as the official, tamper-proof timestamp. Most blockchain explorers can be used to independently verify this entry.

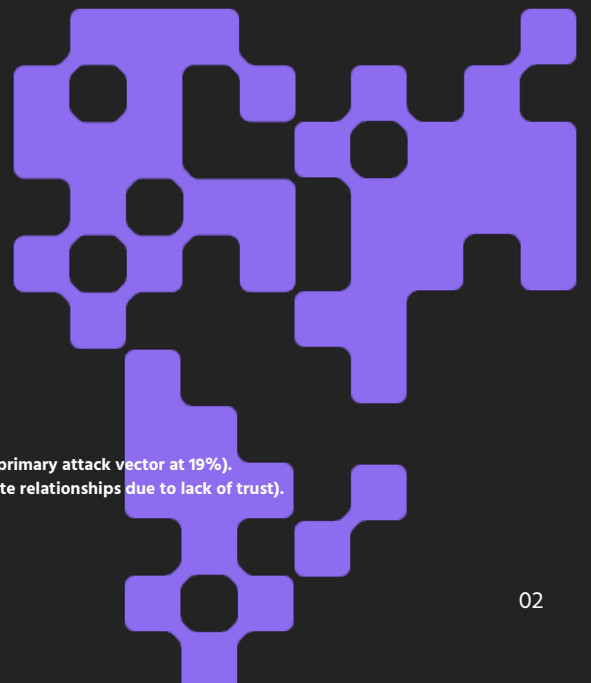

19%

of data breaches involve stolen credentials, requiring independent file verification.*

75%

of consumers avoid brands they don't trust with their data—integrity is key.*

1. IBM Security / Ponemon Institute: Cost of a Data Breach Report. (Stolen credentials remain the primary attack vector at 19%).
2. Gartner / Vercara Research: Consumer Trust in Data Privacy Survey. (75% of consumers terminate relationships due to lack of trust).
